ERP for TPA's

## Real-time field personnel data tracking and automated payroll system

Digitization of various business processes is now paramount. Traditional and manual ways of doing things are being challenged due to constantly evolving markets and the increasing demands of customers. Cost efficiency, turn-around time, and accuracy of information are critical elements for any organization to remain competitive and relevant – especially in an outsourced/ Third Party Agency (TPA) engagement. Productivity needs to be measured, accounted for, and documented to ensure seamless and highly effective operations.

Automation is certainly vital in today's digital-economy.

Solution

The system provides automation of payroll and tracking of field personnel. With vast amount of activity and coordination taking place, it collects data via single point of entry and correspondingly provides a single point of view. This enables fast, paperless transmission of data gathered from the field on to a centralized repository that processes all these information to produce various operational requirements of the business such as reports, inventory, and the like.

The solution is also modular. Thus can be configured to address only the immediate business requirements at the time being without necessarily acquiring the entire, end to end ERP system.

Benefits

> Automated payroll system

> Visibility and management of field personnel

> Efficient Attendance tracking and monitoring

> Accurate and timely field personnel reports

> Enhanced information sharing and collaboration

> Automation creates time to focus on other business matters
